AutoCAD vs. Other CAD Software (AutoCAD vs. Revit) AutoCAD is widely used in the commercial design of computer-aided design (CAD) and computer-aided engineering (CAE) products, including automobiles, machine tools, and skyscrapers. AutoCAD is used by engineers, architects, and architects to create various products, such as drawings and blueprints. Unlike other CAD software products, AutoCAD doesn't require a company to purchase a dedicated server to run their CAD and graphics program. Instead, it connects to a client machine running AutoCAD and enables the client to make changes to a shared folder. CAD software costs between \$2,000 and \$20,000, with larger applications such as Autodesk's Revit costing about \$40,000. It is designed to make it easy to work with technical drawings, technical schematics, and assemblies. Although AutoCAD is considered the market leader in its category, it is not free. A single-user copy costs approximately \$2,000. A multi-user license costs between \$6,000 and \$10,000. Unlike other CAD software products, AutoCAD doesn't require a company to purchase a dedicated server to run their CAD and graphics program. Instead, it connects to a client machine running AutoCAD and enables the client to make changes to a shared folder. AutoCAD is an extremely powerful design and modeling tool for creating technical drawings. Because of this power, a single computer can be used to run multiple AutoCAD files and everyone that works with the file can access it at the same time. It also supports multiple versions of AutoCAD, making it easy for users to move from one release to the next. In short, AutoCAD has everything needed to produce large engineering projects. In AutoCAD 2010, Microsoft Office 2007 and Microsoft Office 2010 were released. Versions History AutoCAD, along with the rest of the company's products, is designed by a small team at Autodesk headquarters in San Rafael, California. Autodesk's first product was for architecture, which debuted in 1982 as AutoCAD. Its next product was AutoCAD R14 for architectural drafting, in 1989. Among the many updates and improvements over the years have been a database interface for switching between applications and opening and saving files, along with some object libraries. The database interface is AutoCAD's primary database, along with the drawing database, DWG. AutoCAD 2008, the first release of AutoCAD in over 10 years, debuted on April 21, 2007. There have been a number of missteps during the product's development, most notably the introduction of the functionality that led to the 2007 version being listed on the Software Associates website as in "beta" status, which led to the final release date being pushed back to an unknown date. The risk of donor transmission of hepatitis C virus: insights from a natural human infection. Hepatitis C virus (HCV) is a major cause of liver disease worldwide, with more than 170 million people infected and approximately 2.7 million people affected by chronic liver disease. Infection is usually acquired via parenteral exposure to blood or blood products and the risk of infection is highest among recipients of blood and blood products. In this setting, the risk of donor-to-recipient transmission can be as high as 3.5%-9.1% per unit, and it is the single most common cause of transfusion-associated hepatitis. Infection among HCV-negative blood donors poses a considerable risk, although the absolute risk of transmission has not been determined. The overall rate of HCV infection is low, with a prevalence of less than 1%. Most infected individuals will not develop chronic liver disease, and chronic infections among those who do develop chronic disease usually lead to only mild liver disease. Many infected individuals remain asymptomatic for years, however. Several treatment options are available, but none are curative. Treatment may be limited to the liver or be extended to involve the whole body. Hepatitis C virus infection is associated with substantial morbidity and mortality, and this is greatest in those with chronic liver disease. The development of chronic hepatitis C has been associated with the risk of hepatocellular carcinoma. A causal relationship between hepatitis C virus infection and this cancer has been postulated, but the data are conflicting. In this article, we discuss the role of HCV infection in the development
