the paxillin/ankyrin complex. Cells establish and maintain cell-matrix adhesions through a series of steps mediated by the p130 focal adhesion kinase (p130-FAK) which depends on phosphorylation. We investigated how the paxillin/ankyrin complex affects phosphorylation of p130-FAK. Paxillin-deficient cells derived from Chinese hamster ovary (CHO) cells expressed constitutively high levels of the paxillin/ankyrin complex. They did not form cell-matrix attachments and had weak adhesions, whereas cells from CHO mutants containing wild-type paxillin

formed attachments. In vitro kinase assays revealed that paxillin and paxillin/ankyrin complex inhibited phosphorylation of p130-FAK but the effect of the complex was much stronger. GST-p130-FAK-(1244-1262) (the paxillin/ankyrin binding site) bound to the complex and inhibited its inhibitory effects on p130-FAK kinase activity as determined by immunoprecipitation, immunodepletion and immunofluorescence. This binding site also prevented binding of the complex to vinculin and protected

vinculin from phosphorylation by protein kinase C. These results suggest that the paxillin/ankyrin complex competes with p130-FAK for a binding site on vinculin and thereby inhibits phosphorylation of p130-FAK.Q: Matplotlib: Diagonal line in a polar plot I'm plotting a polar grid in matplotlib: import matplotlib.pyplot as plt import numpy as np bins = np.

In the front-end, I am using axios to send a POST request to the back-end to update a cookie. The cookie is updated, and then the user is redirected back to the homepage. The redirection uses a POST request

with a formData object as described in the Vue documentation, and is working fine. However, after the redirection, I need to extract the credentials from the POSTed data to make a REST request to the back-end. The problem is that I cannot get the FormData object back to the backend after the redirection. Here's 3e33713323
