The interface works on a single work area, called a drawing. This work area is divided into five panes: An area for the user to enter drawing data. This is known as the tool box. A section for drawing a 3D model with a 3D toolbar. A section for choosing commands, tools and properties. A section for displaying the drawing. The design surface, which is the paper on which the drawing will be printed. The designer has the ability to organize various objects into one or more pages or layers. These pages and layers can be hidden and shown for reference. While in the drawing editor, objects can be assigned to a drawing frame or viewport. In AutoCAD, the user interface consists of a drawing canvas (design surface) and a drawing frame. Objects can be placed on the canvas and they can be arranged or moved using the mouse or trackpad. The drawing frame is where you can manipulate the object. See also: Using Drawing Object Snap and Object Lock The drawing canvas is the 2D surface on which you create a model. The canvas is divided into pages that are numbered. A page is like a paper printout. As in print, you can manipulate pages, as well as copy, move, or rotate objects, in the drawing canvas.
