Evaluation and conclusion As mentioned earlier, Apple's AirPlay Mirroring is built right into macOS on the system level. The tool can be used for remote video streaming between an Apple device and a PC via the home network. It works in a similar way to similar software, with a few key differences. You may want to read on to learn more about it and what options it can offer. A straightforward tool AirPlay Mirroring is a simple app, as it doesn't require much effort from the user. It supports one-way (mirroring) and two-way (also streaming, with both audio and video) mirroring options. It's a handy tool and works well enough for basic needs. It works by sharing a screen capture from the target device to the source. You can configure the audio as well as video settings, choose the screen size and resolution, or alter the output quality. Evaluation and conclusion Unfortunately, we were not able to test this app due to a compatibility issue with the Amazon-manufactured Fire TV device. However, based on a few previous reports, it seems like it's a great option. That said, you can't use this tool as a replacement for dedicated video conferencing tools, especially when it comes to screen sharing. Chernobyl Chernobyl is a piece of sandbox-style software that looks like The Sims, but has a very different focus. You can use it to modify the environment, even rebuilding the whole island on which the simulation is running. Instead of a 2D interface, you see the top and side views of the place, which is almost like a 3D simulation. There are lots of elements to work with, from fruits to animals and buildings, even objects and nature. And after you've added them all, it's possible to trigger specific events to see what happens. Evaluation and conclusion Chernobyl is a very addictive sandbox experience, with a unique look and feel, even if it's not exactly your typical game. It's certainly a highly recommended software for anyone who wants to see the other side of that bustling city. T 09e8f5149f
