Windows AutoCAD LT and AutoCAD are bundled as part of AutoDesk Inventor. AutoDesk Inventor 2011 includes the following additional functionality: Ink Drawing for creating drawing objects such as symbols, lines, and arcs and organizing and managing the drawing objects. Layout, which has the functionality of an architectural drafting suite. Rendering tools for creating photo-realistic 3D renderings using the pre-built effects and a picture of the 3D model or an illustration. AutoDesk Inventor 2011 for Mac requires a user to have a design license for AutoCAD LT 2010. Internet The Web Application API is available to the public. It allows users to access AutoCAD files on web servers directly. Web APIs have also been made available for AutoCAD LT on the web. For Windows, AutoCAD also provides support for the Microsoft Windows XP Application Programming Interface (API). This API provides developers with access to AutoCAD's drawing system, drawing objects, and to other services that are enabled when AutoCAD is installed on a computer running Windows XP. Feature compatibility AutoCAD (AutoDesk Drawing) version 2014 and newer products are able to open and edit files created with earlier releases of AutoCAD, including AutoCAD 2002. For AutoCAD 2002, users need to download a plugin (software extension) to use newer features. AutoCAD 2010 compatibility was announced in AutoCAD 2010's November 2005 software release. AutoCAD and AutoCAD LT files created with earlier releases of AutoCAD can be opened by AutoCAD 2014 and later. Features As with other CAD programs, AutoCAD uses geometric shapes to represent 3D models and to store drawing information, and objects, in 3D space. The geometric shapes are represented in a general purpose coordinate system which is defined by the user or can be automatically defined by the program (after AutoCAD is installed on a computer). The coordinate system is independent of the drawing space in which the drawing is created and is defined by coordinates. If a drawing is created in a specified location, the objects are automatically placed in the coordinate system. The coordinate system is used to measure and draw the objects. AutoCAD provides a number of methods for creating geometric shapes. These include the use of the Line, Arc, Circle, Ellipse, Rectangle, Polyline,
