Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running

---

on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps.

Introduction AutoCAD is a traditional two-dimensional drafting program. It was designed to help small businesses to create and design.

In addition to the 2D drafting features, AutoCAD is also an electronic data interchange (EDI)

---

system, and a business intelligence application. AutoCAD has passed the test of time and continues to grow with many new users every day. AutoCAD is a powerful graphics application designed for professional, medium and small businesses that require more than just a basic desktop CAD software. The following video shows you the features of AutoCAD and how to use it. AutoCAD basics AutoCAD features The following are features that you can do using AutoCAD. Drawing AutoCAD provides you with the tools to create 2D drawing lines, circles,

---

arcs, rectangles and polylines. You can draw freehand, snap to a grid, or snap to a point on the drawing screen. When you draw a line, you can specify the angle of the line and the two ends of the line. You can also create dotted lines to make your drawings easier to read. In addition to the drawing tools, AutoCAD also offers more specialized tools such as the tape measure and pencil.

Drafting Using the drawing tools, you can create and modify simple and complex two-dimensional drawings. You can make changes to the drawing

---

based on the most recent changes made to the drawing. You can make changes to the drawing without having to exit the drawing and re-enter. You can also move objects within the drawing. You can place objects in a drawing either by using the drawing tools, or by placing the cursor over an object and selecting an insertion point. You can make changes to the position, size, and shape of objects in

Architecture has integrated objects representing buildings, such as walls, roofs, rooms, doors, windows, and stairs, and geometric modeling of windows

---

and doors. Objects can be modeled, fitted, annotated, and then be fitted to one another.

AutoCAD Electrical has a features enabling it to support automated electrical engineering design and analysis in collaboration with other AutoCAD applications. The features include: a 2D/3D electrical design environment with arc/cut tools, 2D/3D schematic design tools, and AutoCAD Electrical to AutoCAD conversion (model-to-EIA standard). Autodesk Revit supports parametric modeling in the modeling interface, which is the way to specify and create

---

construction documents. The model may then be exported to Autodesk Inventor, e-design and into the cloud. A key feature of Revit is its ability to model the entire building (floor plan, exterior, and interior walls, floors, ceilings, roofs) in one application. Revit 3D also provides photorealistic rendering. The AutoCAD video application provides the functionality to produce a 3D animated walk-through of the model. This feature is referred to as Animator. In 2010, Autodesk Revit received the ENR/EDR Magazine award for "Best New

---

Product - Architecture." Features AutoCAD does not have a set of standard features, as AutoCAD is intended to work with a wide range of users and in a wide range of technical projects.

While the core functionality is the same, there are significant variations in available features.

There are also variations of AutoCAD by software packages that have extended functionality.

The AutoCAD 2017 release introduced several new features and new functionality. Revit, introduced as an add-on for AutoCAD starting with the AutoCAD 2011 release, has been

---

a continually developed product, with an annual release. Starting with the AutoCAD 2018 release, Revit's functionality was included in the core software, replacing the older add-on ca3bfb1094

Q: Word document header automatically changes shape from header to footer I'm having an issue when inserting a Microsoft Word table on a page and then trying to add content in the next page. The table will appear in the correct location on the page, but the header automatically changes

shape to footer when I add content to the page. The header changes to a colored triangle, with the "top" tab turned off. I've tried to disable the auto-formatting of tables, but it doesn't seem to make a difference. Is there any way to force the header to remain a header throughout the entire document?
