The difficult platforming controls you will be facing, but in the case you are able to solve them, it will add a smoothness to the game.7/10 The Level DesignElliott Jones had the idea of doing well with the level design and presents a diverse set of environments.8/10 The MusicA fitting soundtrack to a puzzle game.8/10 The artworkI find the look to be quite original and often interesting and the presentation of the game very well done.8/10 Without the Sarcasm DONT ASK ME WHY; its not that type of game and most of you don't have a clue so that should give you a hint. Well the answer is simple, Redactem was conceived as a Free indie game with no game design patterns, aesthetics, no sounds, no levels, the only thing that is incorporated in this game was the basic platforming mechanics, but even then it was designed differently than the rest of platforming games. Mostly I wanted to make a platforming game with the simplest game design patterns available that had this hypnotic effect on me, thus I was able to develop this game without any other game design pattern reference which allowed me to produce it at a lower cost. The rest is all that I made it up as I went along, making it perfect for the single guy. So a big THANK YOU to all those who donate/support to my previous games as this was the only thing that allowed me to move on to this one. I love making games but I'm not that good at it, some of my games are small in size, take on average about 5 to 6 hours to beat, but they are polished. I have no concept of business or marketing, so if I was to have a commercial success I would not know how to sell it to the public and all the rest of it. So that's why I'm happy enough to release my games on steam for free. I also love making my own music, I'm a professional guitar player and I love making music but I never try to show it off as I know some people don't like it. So if you have any requests on music, feel free to send me a DM or something on Steam or Discord. I'm a single developer, I have lots of hobbies and a lot of love for technology but I love making games and programming and I can't find any problem to fix in programming that I don't try to solve. So

What's new in Double Memory:

- The Build If you've been following my free program path, you'd have noted that I've been playing around with game engines quite a bit in 2014. I've already reviewed Firefly Nova and Pandemic - both as plugins for Unity that I just couldn't make work on their own, and of course Engine published games like Altered Carbon and Roll7. Honestly, I'm not sure what to do with a lot of the game engines. Some are one-trick ponies (Firefly Nova was pretty much a Unity Shader Expander), some are generic and plug in a bunch of things you don't need (Unity Pipeline) and some are pretty specialized (Roll7 is pretty much just 3D DXT compressed textures at the moment). I know that this is where you come into play. If you're a member of the Kickstarter team who has been working on the project, I am honored to be doing this review. If you're someone who wants to make a game, you're interested in what a game engine would do for your game, I'm looking forward to your comments. If you're just a gamer looking for some cool tools to plonk into your work, take a look at the CopperCube 6 Game Engine. Where is this for you? The CopperCube 6 Game Engine is for someone who writes a game, which is likely to be the most likely route for an indie game to appear in the top-selling list. More than that, it's also for someone who's used Unity but is looking for ways to improve. A engine can save hours and hours of time on trivialities, and CopperCube is a well written, well organized engine with lots of hooks where I could suggest re-working parts of the code that would take me a lot of time to figure out and attempt to implement. My experience with game engines is pretty well built up right now. While I've been using them for the last five years, I've also played around with the specifics of the engines in different genres, and things like Cut the Rope have pioneered a lot of the conventions for what an engine needs to do. So, in the spirit of spending time, I'm spending time with the Wolfire Engine (Unity's My Second Life) and comparing it to Copper
