This extension provides a utility to compare two or more files and folders. File and folder comparison is accomplished through a compare dialog which can be customized for your use. You can also use a popup menu to compare specified files and folders. License: The Eclipse project is open source and freely available under the terms of the Eclipse Public License. The comparison is provided by WinMerge, an open source file comparison tool. It is free to use on many platforms and was one of the largest file comparison tools in 2003. WinMerge can be downloaded from For convenience a plugin for Eclipse 3.2 was created, based on the 3.2 version of WinMerge. Compare & Merge plug-in for Eclipse provides a powerful compare view with features to find, edit, merge and split lines and columns. The compare view has an innovative and user friendly interface, and users can effectively use the features with the help of optional add-ins: An add-in in the form of a plug-in provides analysis of differences, a merge plug-in provides functionality to merge lines and columns, and an align plug-in that allows to align text to the left and to the right. org.eclipse.team.internal.core org.eclipse.team.ui.general Compare and Merge Tools Comparing eclipse annotations in a parallel execution Compare and Merge Tools have been developed for providing a framework to integrate compare and merge capabilities in an Eclipse IDE. Comparing and merging are two complementary tasks performed by many source code comparison tools. Comparing a file means either showing only differences or combining lines that differ in more than one line, while merging represents a task of combining the different parts of the file to obtain a single output file or a single program. The purpose of developing the Compare and Merge Tools is not only to provide a way for developers to use an Eclipse IDE with a comparison tool, but also a way to integrate a comparison tool into an IDE. Some of the challenges in developing the tools are as follows: Efficient merging of the two parts. A merge tool uses all context information for merging, but an Eclipse IDE only has a limited context information. This is the main difference between a compare and a merge tool. Finding the differences that are visualized in the IDE as in a compare tool. Most of the Eclipse compare tools only highlight the differences. The Compare and Merge Tools may provide a way
