AutoCAD is used by architects, engineers, drafters, modellers, designers, construction, and mechanical professionals in a wide variety of industries. AutoCAD history AutoCAD was originally developed for use on the Apple II personal computer platform. For a number of years, a separate version of AutoCAD for the Microsoft Windows operating system was available but it was discontinued in 2005. The early AutoCAD was often expensive and had limited functionality compared to the competition. A key advantage, however, was that it was integrated with computers running the Apple II operating system, making it easy to use with external Apple II peripherals. The original Apple II version of AutoCAD had its main user interface on the Apple II display, including the toolbars, document window, and graphics objects, and was limited in the number and complexity of the objects it could display. For example, the file it created could not be shared with other Apple II users, and the user was required to operate the CAD from the Apple II

display. The new Apple III system, released in 1984, allowed the user to run AutoCAD from a monitor connected to the Apple III computer. The Apple III and the new program were released at the same time. The first version of AutoCAD was 2.0 and was released on 22 November 1982. AutoCAD 2.0 featured the first native Apple II graphics, with an interface similar to that of other popular CAD programs. Many of the original Apple II features were added in the release of AutoCAD 2.1 in March 1983. The Macintosh AutoCAD was introduced to the Macintosh platform in 1983. Initially, the Macintosh version of AutoCAD required a program that was supplied by the designer or architect, and this was licensed for use on a single machine by one user. This meant that no other user could use the computer until they had paid the licensing fees. AutoCAD on the Macintosh was a major advance on the Apple II version as it allowed multiple users to run the program at the same time, making it easier to use in a group setting. Users ran AutoCAD on a conventional Mac or Macintosh system, and graphics were displayed on the screen of the Macintosh computer. A version of AutoCAD for

the Macintosh was first released in November 1983, with the first public demonstration taking place at the 1984 Winter Consumer Electronics Show. This version of AutoCAD, like the Apple

Heart rhythm disorders are one of the most common cardiovascular diseases and are associated with significant morbidity, mortality, and health care cost. Recent studies suggest that fetal cardiac electrical activities have the potential to be used as reliable markers to assess fetal health and performance. The goal of this proposal is to develop a fetal electrocardiogram (FECG) recorder with a fully integrated wireless system. In a Phase I study, a FECG recorder will be designed, fabricated, and tested. The designed FECG recorder, fabricated from flexible and stretchable microelectrodes, will be fabricated by a two-step lamination process. The FECG

signal will be wirelessly transmitted to a single-chip microcomputer, which is integrated into the FECG recorder, where the signal will be processed and stored. A critical consideration for the development of the FECG recorder is to ensure the safety of the mothers during the recording. To this end, we will perform a fetal electrocardiogram recording on pregnant ewes to test the ECG recording system and determine the maternal electrocardiogram levels. We will then perform a separate recording on pregnant ewes to determine if there is a significant correlation between maternal and fetal cardiac electrograms. In addition, we will incorporate appropriate ECG filtering and baseline subtraction algorithms to reduce maternal ECG interferences. Our long-term goal is to develop a disposable FECG recorder that is relatively inexpensive and can be easily deployed in medical clinics and public hospitals. We envision that such a FECG recorder can be used for monitoring fetal well-being, diagnosis of cardiac dysrhythmias, and post-partum fetal monitoring.

Q: Need help identifying a machine I have a machine that I need help identifying. The backside looks like this. It is about 1 inch thick

and maybe 4 inches long. The case is aluminum, not plastic. The label says "Sony or Philips, Laser 21/43". On top there is a small speaker and it says "HOT COOL FLOW". On the bottom there are 2 switches and a indicator light. It also has a small flat cable. On the front side there is a hole with a raised ring around it and a small indentation. Is anyone familiar with this model?
A: That's ca3bfb1094

A highly regioselective synthesis of azaphosphonate-

substituted diacyl phosphines via one-pot palladium-catalyzed Heck cross-coupling of P(O)-substituted arylacetic acids and P-C bond formation. A series of new diacyl phosphines containing arylazaphosphonate were synthesized in high yields via Pd-catalyzed Heck cross-coupling reaction of P(O)-substituted arylacetic acids and the corresponding P-C bond formation. This reaction proceeded regioselectively via the Pd- π complex route and proceeded under mild conditions. Significance of endothelial function tests in vasoactive drugs. The hemodynamic effects of nitroglycerin, guanethidine, isoprenaline and hydralazine were compared using a number of tests of endothelial function (mechanical, permeability and thermal)
