Graphics Guru: Illustrator Illustrator is a vector-based graphics program that has become the standard for creating and editing vector graphics. This program was initially developed by Aldus to create graphics for the desktop publishing market. Today, Adobe has taken ownership of Illustrator and has continued to develop and market it for both desktop and web publishing. Illustrator allows you to create and edit vector (vector graphics) artwork using shapes and paths. You can enhance images with filters, as well as add color and create transparency. By changing the way you position and edit objects, Illustrator enables you to create great artwork with and without the use of a mouse. For more on using Illustrator, check out `www.graphicdesign.com/adobe/illustrator/`. Flash works with bitmap images and vector graphics. Although you can use it for both, Photoshop is much more powerful with its layered architecture and ability to create dynamic artwork. Although Macromedia used to be known for the Flash IDE, the company has recently been taking a big hit in the market. For more on Adobe's Flash, check out `www.adobe.com/products/flash/versions.html` or `www.macromedia.com/products/flash/architecture/`. This program has become the industry standard for both desktop and web publishing. InDesign is a layout program that works with a layered approach to creating print and digital media. After you create your text, images, and other elements, you can build the document in layers. Each layer can be positioned, sized, and arranged according to your needs to create different publications. After you create your project, you can save your work as a PDF document, create a Web page or Web site, or print it in Photoshop or other applications. A beautiful Cochin Jewry from the eighteenth century consists of two synagogues, a cemetery and the Museum of Jewish Art (the Arts & Crafts Society of India purchased this art work from the museum some years ago). The first temple is on the king's square, which was built in 1800. In 1851 it was enlarged and a new floor was laid (and the gallery added). Inside, the ceiling is painted with a Persian-patterned golden ceiling, the first such ever seen in India. An interesting feature of the synagogue is the conical minaret. In the thirteenth century, this minaret was one of the first in the world, built by King Fakhruddin III, of Turkey. The second synagogue, on Devan Nair street, was built in 1816, in the Jewish Renaissance style. It is similar to the present synagogue of the Portuguese community on Almirante street in Bombay. The cemetery dates from the 18th century. There are many tombstones from the 17th and 18th centuries. Of special interest is a decorated jain tombstone of 1784.In fiscal year 2014 (FY14), the agency responded to 419,263 firearms-related calls, up 5.8 percent over FY13.
