Language design The language used for command-line AutoCAD commands is based on AutoLISP, which can be run within AutoCAD and is also embedded in AutoCAD itself. AutoCAD's command language is an interpreted language: all programming in AutoCAD is done in the interpreted language AutoLISP. Forms AutoCAD supports form creation for drawing entry, view and report creation. Forms include forms for drawing entry and for the viewing of drawings, as well as forms for the creation of drawings that are exported in various file formats. Multi-user support Multi-user support is an advanced drawing feature offered in AutoCAD that allows users to manage drawings created for multiple users simultaneously. For instance, users can work on different parts of the same drawing file, or work on multiple drawings at the same time. Multi-user support allows for collaboration on a drawing file, which includes features for revising a drawing file, including commenting on specific features of a drawing file (such as text comments), revising a drawing file, and sharing a specific drawing file with multiple users. Partial views and floating views Partial views are a useful feature of AutoCAD that allows a user to have their entire drawing window covered by a floating window, or floating pane of the screen, that displays only the part of the drawing window that the user has opened. This enables users to view only a portion of a drawing without the need to manually scroll to see the entire drawing. The floating pane can move from view to view, or to a side of the screen. In contrast, traditional views are fixed. They do not float. They also do not allow for the display of the entire drawing. For instance, a user may want to work on the left side of a drawing, but all of the viewable area is on the right side of the screen. The view controls in the Edit Window in AutoCAD are also context sensitive, so they can be used differently for each type of view, whether the view is a partial view, a floating view, or a traditional view. Services Services are AutoCAD functions that enable a user to automate various tasks, such as the creation of drawings or annotations. The most common types of services that are included with AutoCAD are known as drawing services. AutoCAD drawing services are listed in the Table below. Symbols Symbols are a type of AutoCAD drawing service.
