Save a compatible file type, and the Photoshop file will be saved in that type, even if your computer thinks it's saving in a different format. The format can be changed later using Adobe Bridge. Make a PSD file with transparency and/or layers. The image appears flat and is in RGB (grayscale). We added multiple support for new color spaces, including Adobe RGB, Apple ProRes, and Sony XAVC. We updated the compression algorithms used for storing color information. In addition, we've optimized the reading and writing of 32-bit indexes of image data. In some cases, new features require increased memory usage. The KISS workflow is fast. You can quickly move around a photo and edit the various components of the image. You can create a macro to set a parameter and have the macro play back sequences of highlights, shadows, and midtones. You can paint on top of an image to create a matte, replace parts of a photograph, or burn in a new photo. You can create a customized adjustment layer with a gradient or pattern that will automatically be applied to all copies of the layer above it.

In addition to bringing public access Photoshop on the web with the browser, Adobe is also working to make web applications that want to make professional images run faster. The P3 color space is one of the first results of that effort and allows image editors to create file for the web that can be played back on any device with any color gamut monitor, without the need for an ICC profile. In addition to that, Adobe is enabling web designers to use the new CSS storage API on the web. This allows developers to use the built-in, high performance storage APIs including IndexedDB, Web SQL and Web Workers to more easily create, debug and test pixel-precise images. These new APIs and features are available today in the Chromium porting project . **What It Does:** In your Graphical User Interface, fill the space behind the window with the color of your choice to make it easier (or more fun) to work with color. The Fill tool lets you fill pixels with a single color. The Fill tool, formerly the Paint Bucket tool, fills any solid area with the color of your choice. It's great for solid backgrounds or coloring large areas. It can also be used to apply patterns to your images. The Gradient tool within the Fill tool lets you create a nice, faded background effect of the color of your choice. Over the last three years, Chrome has been working to empower web applications that want to push the boundaries of what's possible in the browser. One such web application has been Photoshop. The idea of running software as complex as Photoshop directly in the browser would have been hard to imagine just a few years ago. However, by using various new web technologies, Adobe has now brought a public beta of Photoshop to the web. e3d0a04c9c

Virtues of Photoshop include its support for 6- and 8-inch displays, plus an improved interface for working in larger document previews, and it's more responsive to stylus input. Photoshop 8 has simplified elements to create a more accessible design for beginners (and takes features from Illustrator), and it offers a new Cloud Services Finder, along with faster file uploads. With the updates to stylus handling, you can reduce dropped strokes and see more accurate thumbnails of strokes, and you can more easily paint and draw with the improved accuracy of the drawing tool. There's a Find & Replace panel near the top of the image window, so you can recall matching files, and the new Text panel lets you select all the text in an image; in Illustrator you need to select all to do the same. Photoshop 8 offers a new drawing tool with dual-scroll brush support, a new drawing-panel ruler, and a few extra brushes. You can also remove color fringing and soften shadows using new controls for softening and for increasing or decreasing the sharpness of hard edges. And a few new tools--including an automated gradient tool--are designed specifically to make it easier to create custom gradient fills now that the tool offers 3D viewports. And you can harvest the unused portions of a background layer to create additional layers and adjust other layer properties. Photoshop 8 also includes toggling the camera for 36 view types, including 16 new 2D camera views; improved Face Detection tool accuracy, with fewer unwanted matches; a Stroke tool that simplifies creating and applying numerous geometric strokes, plus controls to help you draw, and paint with, vector paths. For finer-grained content removal control, Photoshop 8 has refined the content-aware up- and down-

sampling feature that lets you eliminate unwanted elements and use images as images. And a new version of the Node tool gives you the flexibility you need to build scenes--from still photos or video clips.

I'd like to take this opportunity to acknowledge that I've been an avid user of both Krita and Ardour for most of my life. Ardour and Krita are both powerful tools and I'd like to thank everyone on the project for their hard work. Since I'm no longer the maintainer, I let Ardour 2.6.5-2 to make it into GA — great work to everyone involved! The GIMP project is also proud to announce that it will officially acquire the development of Ardour. Thus, as a final component, Ardour will have GPLv3 license. I am optimistic that Ardour can be "transplanted" to the GIMP with minimal issues and I trust that the GIMP project will maintain Ardour going forward. If there are still issues, the GIMP project is always happy to hear from the Ardour community and consider any improvements. While the GIMP hasn't done so yet, we would love to update GIMP's own photo editor to use the new 2D API as well. This would give us access to all of the existing plugins GIMP already has, enabling multi-file editing, perspective correction, the non-destructive layer masking, perspective adjustments, as well as many of the things that are possible today only in Photoshop. There are many other vital features of Photoshop that would be greatly missed if they were to be removed, such as the Neutral Density filter, the Color Picker, and many others. Many of these will likely be baked into other areas of the applications, whether they are native or web-based, and thus will not be immediately missed by users.
