## AutoCAD Crack [Latest-2022]

Autodesk AutoCAD files are not compressed. Each object is saved as a separate file, and files with identical names are stored in the same directory. The objects are stored in raster (non-vector) format. Note: In CAD programs, objects and materials are stored as files or in a database. Design Output Generated from the CAD software includes AutoCAD DWG and DGN files for 3D models, 2D drawing files for 2D drawings, and DXF files for 2D drafting drawings. When exporting AutoCAD DWG and DXF files, you are prompted to select the resolution and type of output; for 2D drawings, you can select the number of copies of each drawing. Creating AutoCAD DWG and DXF files When creating a new AutoCAD DWG or DXF file, you can opt to open a predefined template or create a blank template. In the DWG template, templates are organized into groups based on application type. Templates vary by application type; for example, the DWG template for an architectural design will include different components, such as walls, doors, windows, and roofing. After the template is selected, AutoCAD prompts you to enter the number of layers needed, the plotter resolution (dpi or dots per inch), and the application type. TIP: The number of layers can vary depending on the type of drawing. The higher the number of layers, the thicker the lines and the more precise the drawing. Generally, the number of layers should be between eight and 32. The DWG Plotter dialog box opens with the appropriate settings selected. You can select a predefined plotter resolution (usually 90 or 120 dpi) or enter a custom plotter resolution. The default resolution is 72 dpi, although you can choose to use a higher or lower resolution. If you select a custom resolution, you must enter a value in the X and Y boxes, with X being the number of lines per millimeter and Y being the number of lines per degree. You can also select the plotter type. Figure 1 shows the Plotter dialog box with a custom resolution set to 100 dpi. The values you enter in the X and Y boxes are for the user's plotter. For example, you can enter a value of 3 for the X value and 8 for the Y value

China censors Pokemon games Published duration 15 December 2011  
image caption The games have been taken off the websites of all Chinese versions of Pokemon The release of Pokemon games has been banned in China after the country's censors objected to references to the Chinese character Zhongguo. The games, which feature the giant red panda as a character, were pulled from the websites of all Chinese versions of Pokemon. The games will be removed from all retailers but people who have already bought them can download them from the official Pokemon site. Earlier, the official Chinese edition of the magazine Nintendo Power ran a series of articles about the games. It said that the "red panda has the face and voice of a Chinese". But the games - Pokedex 3 for the Nintendo DS and Pokedex 2 for the Nintendo 3DS - feature many other characters which are also written in Chinese. One of the games also features a fictional "China" nation, which appears on the cover of the game, with "red pandas" as its "national animal". "We've tried to make the characters as beautiful as possible, even though they're animals and have a lot of rough edges, so people can see the beauty of the Chinese culture," said Chinese creator Satoshi Tajiri,
