AutoCAD includes a variety of other features, such as creating parametric 3D models, managing document content, importing and exporting data, and running calculations. Autodesk Revit® Architecture is a 3D-modeling and collaboration platform that is integrated with AutoCAD. Revit offers feature-rich construction information modeling, automatic design documentation generation, coordination of materials and components, and comprehensive 3D visualizations. Design for manufacturing (DFM) is the process of documenting design intent for 3D printing and milling. Designing for manufacturing is an important part of the software industry, since so much of what is manufactured today is software-driven. The term is a brief for the "Dimensional Graphics Association" and "Designing for manufacturing" and can be used for dimensions of geometry and the techniques to achieve it. DFM may be done by: Autodesk-owned software (Design Review Manager) Freehand drawing (See also Freehand Geometry) "Two dimensional" software (AutoCAD, AutoCAD LT) Sometimes "three dimensional" software (Architecture) In CAD software the term can mean "Designing For Manufacturing" See also AutoCAD LT References External links AutoCAD Feature Forum Category:1982 software Category:Computer-aided design software Category:Computer-aided design software for WindowsClass{SpecialCaseExecutionAttributesProvider.class} and {@link SpecialCaseExecution.SpecialCaseExecutionAttributes#getPurityLoggingSessionMappings()}. */ @Override public Collection getPurityLoggingSessionMappings(PurityLoggingSessionMapping query) { return get(SpecialCaseExecution.SpecialCaseExecutionAttributes.class, "purityLoggingSessionMappings", query); } /** * Lookup the purity logging session mapping for the given {@code query}. * * @param
