Most people cannot just switch pain killers without proper follow-up care from their doctor to make sure they are safe while taking them. The symptoms of a concussion are very similar to that of a migraine. There is no real way to tell what the next symptoms of a concussion will be because a concussion is a very different type of injury. Additionally, the effects of concussions are not always fully known. Computers first appeared in central offices of the telephone companies. They took messages and converted them into pure numerical data, sorted by number and then sent these messages electronically to people who dialed into the system. During the world wars, telephones became more popular. People could not always travel back home and therefore they needed a way to contact their family and friends. The telephone became a central feature in people's homes. During the 1940s, during World War II, most small and medium-sized businesses used telephones to communicate with their employees and customers. There was also a need for computers that could store data and efficiently sort it. In 1948, the first large scale electronic computers were built by electronic engineers in England. By 1950, there was interest in computerizing office systems. The first large scale computer systems that were being developed were actually large calculators. The earliest computers that were being developed could not store a great deal of information. They were too slow to be useful. However, business executives were needed to take advantage of the new machines. By the early 1950s, businesses that needed to keep track of records needed computers. This led to the computers becoming more efficient. Computers in this early period were made of vacuum tubes and were very expensive. This made it difficult for small and medium-sized businesses to afford them. By 1954, computers became affordable for small and medium-sized businesses. These early computers were called mainframe computers. These were large and powerful computers that could store and process a great deal of information. By the early 1960s, there were actually more computers in the office than typewriters. This led to some businesses using computers in an automated way. This was called an automated office. There were two types of automated offices. In the first type of office, all the clerical work was done by a computer. The computer did almost everything that a clerk or secretary would have done. This was called a small office automation system. The second type of automated office had
