Revisions 2 and 3 AutoCAD provided capabilities to create 2D drawings and 3D models. AutoCAD 2002 introduced multi-user collaborative workspaces, allowing multiple users to work on a single drawing simultaneously, providing the capability to create any 2D or 3D objects. The earlier versions of AutoCAD also allowed, but did not require, collision checking between objects and displayed potential problems in the form of red marks on the design surface. This was later improved with revisions of AutoCAD that calculate the exact location of objects in the scene. With the introduction of AutoCAD 2004, AutoCAD began displaying these problems as "typecasts", gray or white marks on the design surface, indicating where collisions would occur. AutoCAD 2005 allowed both the gray typecast marks and the red marks, and could display them in a specified color. AutoCAD 2007 introduced the ability to automatically plot geometry onto a paper surface, and AutoCAD 2008 could view multiple paper surfaces in a single view, allowing plotting on all of them simultaneously. AutoCAD 2011 introduced the ability to share your drawings and models by publishing to the Web. AutoCAD 2013 also introduced a cloud-based service to automate the software deployment process and boost collaboration between users and AutoCAD developers. The cloud service allows for "cloud sharing" of drawings and models, with integration into other applications and cloud-based devices. Revisions 4 through 2013 Autodesk introduced a new object-modeling technology, referred to as "Dynamic Components" (a.k.a. Dynamic Components (DC) or Dynamic Components Technology, also known as "Dynamic Components"). Dynamic Components adds an additional layer of editing and organization to AutoCAD models. Revisions 5 through 2013 Autodesk introduced new ways to manage data and project assets in the cloud. Revisions 6 through 2013 Autodesk introduced the ability to manage the cloud via the cloud management console, which is accessible via the new cloud interface. Revisions 7 through 2013 Autodesk introduced the ability to manage the cloud by using the cloud management console. Revisions 8 through 2013 Autodesk has added powerful new 2D and 3D modeling tools to the AutoCAD product line, based on Dynamic Components technology and technology that is shared with other Autodesk products such as AutoCAD Architecture. Revisions 9 through 2013 Autodesk has changed the

18.4.2 Autodesk Exchange Apps The application store Autodesk Exchange Apps offers a large number of products for AutoCAD 2012. It is the easiest way to customize AutoCAD in order to access new functions or modify the existing ones. The development of this product was a rather long process. Indeed, in Autodesk Exchange Apps, there are functions that are directly accessible by the end user but there are also functions that can be accessed only through third-party applications (because they are not yet available). For more information about Autodesk Exchange Apps, please visit the following URL: Autodesk Exchange Apps is the easiest way to customize AutoCAD through third-party products. ## 18.5 Some Practical Considerations Here are some general guidelines to consider when integrating your own application with the Autodesk software architecture. af5dca3d97

More about SmartCadd There is an amazing option to use "Use SmartCadd" for creating AutoCAD files in 3ds Max. It has its own shortcuts and commands. Please see the option "Use SmartCadd" under item "3D Entity Creation" A: It looks like you're trying to create a smart object from a key. If so, the answer is simple: the key you have doesn't work. You'll need to create your own smart object and add it to your 3D scene. You can download and use the free smart object creator tool from it's developer, Smart Objects. Q: jQuery ajax in Laravel 4 - Getting "Must provide a collection" error I have looked at all of the other answers for this and I have no clue why mine is not working. My controllers: UsersController.php public function getMessages() { $users = User::all(); $messages = DB::table('message')->where('users_id',$users->id)->get(); return Response::json($messages); } MessagesController.php public function index() { $messages = Message::all(); return Response::json($messages); } My HTML: $(function() { $.ajax({ url: "{{ route('messages.index') }}", method: "get", success: function(res) { $("#messages").append(res); } }); }); I do not get any errors and when I go to my Laravel error log I get: [2015-06-22 22:52:06] local.ERROR: exception 'Symfony\Component\HttpKernel\Exception\HttpException' in /home/vagrant/Code/personal/packages/laravel/vendor/laravel/framework/src/Illum

What's New In?

Customize template views: A great feature of Autodesk® AutoCAD® LT® 2020 is its ability to scale 3D views. Set a new default scale for each view you create, and you can easily configure the new scale for a single drawing. (video: 4:22 min.) Improved editing of annotation layers: You can now specify the scale of the annotation text and lines. When the annotation layer is displayed, the text and lines appear at the appropriate scale in the drawing window. (video: 1:37 min.) Improved XYEdges and YEdges tools: With new XYEdges and YEdges tools, you can edit features on 3D surfaces. You can also edit features on 2D surfaces in AutoCAD LT®. (video: 4:48 min.) Properties pane enhancements: You can create a new series of parameter values in the Properties Pane to define variations on the same parameters. To use the parameter values, you can turn a drawing parameter into a template that you can then apply to several drawings. (video: 1:49 min.) Actions on a single command: Some actions can now be performed on a single command. For example, you can create a series of new objects (or edit existing objects) with one command. (video: 2:12 min.) Select by similar feature: You can now select objects in the same layer by similar feature. For example, you can select several identical walls in a construction plan. (video: 1:56 min.) Layer tools: There are now more layer tools in AutoCAD LT®. You can create, edit, delete, and move layers. In addition, you can create new views based on your layers and share and edit them. (video: 4:37 min.) Design tools: The Design panel can now display multiple levels of properties and prompts. For example, you can easily view the properties and prompts of a layer or drawing or you can toggle through each property or prompt to the level you want. (video: 1:31 min.) New parameter names in Annotations The names of some of the parameters in the Annotations Panel have been changed. You can now apply some of the new parameter names to the various annotation types. (video: 4:57 min.) More options in
