.Transillumination of the anterior chamber for assessment of the optic disc, retinal vessels, and optic nerve. Transillumination is the radiographic technique for detecting changes in the optic disc and retina. Using ophthalmoscopic glass, the retinal surface is illuminated and images of the optic disc, retinal vessels, and optic nerve are transmitted via the back of the eye to the retina and photographed. Transillumination is a simple, inexpensive, and painless technique that is useful in the evaluation of eye diseases that affect the anterior segment. This article describes a technique for transillumination of the optic disc, retina, and optic nerve. The development of the technique is shown by photographs, illustrations, and a video.**UPGRADE:** Compatible with Adobe InDesign CC 2017-2018 Compatible with all these features: ACROBAT PDF creation Project management Print output PDF creation Using Acrobat (you can create a PDF from InDesign documents: Create PDFs from a single, multi-page InDesign document Create a PDF from text frames Create PDFs from linked Photoshop and InDesign documents Linking Adobe Photoshop elements to InDesign files Create PDFs from InDesign documents in a user defined output folder The ACROBAT application is available in Creative Cloud.
