[Download](#)

on the right side of the camera, there are two custom controls, microphone and record, which offer up a few more creative possibilities. the lens control panel also features a variable af point. it shifts between af and ai, which lets you focus on static or moving subjects respectively. this feature is awesome when you need to shoot subjects that move fast or are out of focus. finally, there is a long button on the right side that allows you to adjust the iso speed. finally, there is a red dot exposure meter on the top right corner of the lcd panel. this makes it easier to judge the exposure of a subject and adjust accordingly. overall, the blackmagic pocket cinema camera 6k is a great camera that produces high-quality raw video. with a bit of practice, you can get better results and more options in post-processing. unfortunately, the lack of gps is only a minor downside of this camera and the battery life is not great. blackmagic designed the camera to be portable, which i understand, however a small lithium-ion battery and gps would have been useful and made the camera truly portable. the blackmagic pocket cinema camera also comes with a sturdy pouch case which is weatherproof and is magnetic sealed. however, the pocket case isnt as convenient as a separate camera case. for instance, you cant really carry the blackmagic pocket camera in its case with the battery out when its recording, and that is a nuisance when travelling. outside of the case, there are two external microphones available in the box. buttons on the top side of the camera allow you to switch between the two, but they are hard to control in certain situations. for instance, if you are recording the countdown to a birthday party, i would have preferred to have one mic pointed away from the audience and one pointed directly at me. but the camera was given to me as a gift, and it would be awkward to ask my parents to find an extra microphone just for me.

FULL Blackmagic 2.8.6 [Portable]

the 4k60 is overkill for this type of project for a number of reasons. the first is that it has a minimum input of up to 100 megabits per second (mbps) and the camera takes anywhere from 8mb to 14mb of data per second. for my 2-month project, this means i had to shoot more than 1,100 gb of material. secondly, although the 4k60 looks awesome and will help you with post, it took me about a day and a half to shoot the first 1,100 gb of footage for this project. most of my shooting was basic hand held content and you can get away with doing that at 1080, 24p or 60. the blackmagic pocket 6k pro camera ships with a gimbal head. its an all-metal head that is capable of holding the camera steady and repositioning it when theres action. it also allows you to gain control over precisely how much camera shake you have in your shot. i suggest you do some test footage with the blackmagic pocket 6k pro before using this feature, as getting used to camera shake can take some time. fortunately, it doesnt take too long to get used to, and i highly recommend the blackmagic pocket camera 6k pro gimbal head for the following reasons: it basically eliminates camera shake, it can steady the camera down to 2 inches off the ground. its fine for very small movements like zooming or tracking a motionless subject. its a small, portable gimbal head. the bmpcc 6k pro actually ships with a bunch of lenses. the included canon ef 16-35mm f/2.8 l is a great choice for most people. its a general-purpose zoom that makes it perfect for night events, telephoto shots, and just general day-to-day shooting. however, theres one real drawback to this lens, which is its maximum aperture. while it has f/2.8, it has a fixed focal length of 16mm, meaning its only good for wide shots. and even then, its sharpness and contrast arent the best. to be able to capture a more narrow range of focal lengths, i highly recommend getting the supplied canon ef 16-35mm f/4 l lens. 5ec8ef588b
