## Malwarebytes Premium V 2.2.1.1043 New Activator 2016 Free [LINK](#) Download

i have been a paid subscriber to malwarebytes since 2009 and have never had a problem with their software. it's been a pleasure to use the software and i would not want to go back to any other anti-virus software. i would also not recommend any other software company to use malwarebytes as their base for testing their products. if malwarebytes were to become defunct, i would not be interested in using the software for any other reason than it is the most effective and most reliably working anti-virus and anti-spyware software i have ever come across. if this were to happen, i would also not want any other software company to pick up the slack and keep malwarebytes alive. i have been using their software for years and have never had a problem with it, and have never had to call for help. the functionality is excellent. it does what it is designed to do. it is fast, reliable, and effective. the interface is clean and uncluttered. i would recommend malwarebytes to anyone looking for an effective anti-virus and anti-spyware solution. there is a lot of software on the market, but malwarebytes is the only one that has held up well over the years and continues to improve. as of today, 08mar2017, malwarebytes pro (version mb3-setup-consumer-3.0.6) is still a resource hog, causing random windows 10 blue screens forced restarts freezing slow performance. upon arduous pc restart, it is a crapshoot whether mbam will load completely, or load partially (real-time scanning disabled or anti-ransomware disabled or anti-exploit disabled, etc). the malwarebytes pro 3.06 issue does not appear to be resulting from a conflict with any particular anti-virus software brand or version; since the issue is reported among various anti-virus software users (kaspersky, mcafee, eset, avira, etc). ive been using malwarebytes software since the beginning, and now experiencing major pc performance issues since malwarebytes merged anti-malware, anti-exploit, and added anti-ransomware. my system is running windows 10 home, version 10.14393 build 14393, 64 bit, 32 gigs ram. yesterday, i was unable to complete installation of the latest version malwarebytes 3.6.1469-1075. the failed update trashed my earlier version. so, i had no choice but to uninstall malwarebytes 3.6 entirely. very disappointing.
