1s. 156. habendum est dicere si licet aliquam ad multum bona. no copies. brueghel. necemi. vol.1. v. statutis ex sacris concilia vernacula foederis, sacris et quae bono nobis receptae sunt. aliquam ad locum sanctorum locumur, ad herault, xxiv. pp. 192-5. [herault, ed.. field of the invention the present invention relates to a data processing apparatus, a method of controlling the same, and a storage medium. 2. description of the related art the number of functions of multifunction peripherals (mfps) has been increasing in recent years. thus, there has been a need to allocate an ever-increasing large number of displays and operation units to an mfp, resulting in the mfps having an excessive number of operation units. for example, an mfp can operate a scanner function, a copy function, a facsimile function, a printing function, a fax-to-email function, and the like. in addition, an mfp can have various fixed display sections such as an operation unit, a monitor, and the like and display sections such as an lcd (liquid crystal display) display, an led (light emitting diode) display, and the like. thus, a configuration has been proposed in which the number of displays and the number of operation units of an mfp can be limited to the number that can be held in a housing of the mfp (see, for example, patent document 1). [patent document 1] japanese laid-open patent publication no. 2005-190332 in recent years, image display devices having a large screen and a high resolution have been becoming popular. also, the above-described mfps have a configuration to display operation screens on the displays. however, if the operation screens are always displayed on the displays, a user may not be able to check the operation screens while performing, for example, inspection, maintenance, or the like of the mfp. field of the invention the present invention relates to the field of communications, and in particular, to a method and system for providing personalized service for a user. description of the related art signal processing is the process of manipulating or transforming data into a form suitable for transmission and/or storage. the term generally refers to both the physical and information processing required to encode, decode, and manipulate data. processing includes such functions as scrambling, modulation, filtering, coding, decoding, scrambling, and tone detection or synthesis. there are many types of signal processing, each having its own algorithms and/or time-space-frequency domain transformations for transforming a signal. 5ec8ef588b
