BladeEnc encodes WAV files to MP3 or AAC files. The program supports several settings such as sample rates, bit rates, number of channels, encoder modes, etc. Features: 1. An easy to use GUI with many operations such as setting up the parameters. 2. Many parameters can be set in the GUI, they are in different text boxes. Each textbox has a label, a corresponding check box and a tooltip explaining what the parameter value, or reset a parameter value to its default value. 4. A very quick parameter optimization algorithm is implemented that can perform a short trial run to find the optimal settings for the WAV file. 5. There is an additional window that lets you examine the compressed WAV file. This window can be hidden by using the encoder settings are saved with the compressed WAV file. Known problems: 1. If you open the encoder GUI after closing it, a window may open saying there is an application already using the encoder. This is because the executable is still running in the background. You will have to wait until it exits before you can run the encoder GUI does not work, then the exe files are either corrupted or the path to the exe files is not correct. You should try installing from a clean install and then try again. Compile Options: The following options can be passed to the compiler when building the encoder: a be reduced by either using lower bit rates, or using fewer channels. When the encoder is estimated by the program. The value of this variable indicates the desired maximum memory usage for the encoder can be reduced by either using flue is examined to find the optimal settings for the remainder of the file. The number of trials and the time taken to perform a trial run can be specified memory for its processing, but if the file cannot be encoded completely in that memory
