Cracking Adobe Photoshop is a lot more involved than installing it. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

For those who know me, I'll stop short of mentioning the fact that I am a Lightroom user as well as a Photoshop user. (A total of three different software) What, no reason to bring up my two favorite photography applications? Of course, Lightroom has won first place in our publication year after year, maybe not this year, but in 2015 and 2016. Not since Shotwell has a free app received more love. Truth be told, I am a determinist, as those of you who regularly visit my blog may know. That is, I am always scanning for the newest MAC OS features and updates for my desktop applications and sometimes I even use Windows software in my macOS workstations. Well, with that said, I'd like to conclude this review of Adobe Photoshop and explain why I love it. It is, mind you, excellent software that I will never consider using anything but if I ever were to need it. Simply put, its seamless integration with the iPad Pro, the Apple Pencil and the other iOS devices means that I will never have to leave the Adobe family. Even so, Adobe doesn't facilitate this by keeping exclusive apps, or even having a dedicated iOS team, but by making its other software apps work very well with the Apple Pencil. Of course, that may also come from me having to use Lightroom and Photoshop quite a bit. And now the elephant in the room : I will definitely be taking the Apple Pencil with me wherever I go, but I am perfectly happy with an iPad Pro. Every software company should let us keep an open mind about all the tools they provide and how they can be used interoperably. As we embark on the newest editions of Apple products and Windows 10 and macOS 10.11, I am sure that we will all be witness to more and more laptops running Windows and macOS running Apple's iOS. If this were to happen, Photoshop will be the first Apple software that I will plan to purchase instead of all of its Linux-based Office counterparts. It's only a matter of time before this happens.
