Color: This is a real big feature, there are 9 different color modes to choose from. You're given the opportunity to go with a trendy and fast, or a pleasing natural look. Each color has its own setting to allow you to fine tune the image. Fill Filter: Creates a painting-like effect on a layer or selection. It works like a stencil or cut-out, and leave the behind area transparent and empty. Use this filter to paint on top of another image or to mask off sections of your image. Hue/Saturation: This lets you correct colors, and offers both manual and automatic options. You can use it to adjust the colors in groups of pixels or to correct the predominance of any color. Hold the shift key and drag to make a selection of just black, or just white pieces. Lens Blur: There are 6 different blur modes that you can use to blur the image, they can be set individually for sharpness, fade, noise and distortion. The far differences are visible, so that makes them easy to control and tweak. **New Filter Effects:** Special effects artist of the year, Lee Petit, is making his debut with Photoshop with a collection of special effects filters. The filters include Blue Flower, Color Sketch, Light Table, Light Spring, Light Nude, Light Paris and Light Heart.
