Cleanbots, a project headed up by David Simister and Karl Moore, is the first to work by itself. It doesn't need to be told what to do - its sole purpose is to complete a certain task and then move on. It is smaller than you'd expect, though. At only 1.3 metres tall, and weighing just 2.1 tonnes, it is smaller and lighter than any of its robotic predecessors. But its smaller size means it can be manufactured in bulk and can achieve the same task as larger versions. The bot, which was built by engineering students at the University, can climb over 40 degrees and can clean most vertical surfaces. In practice, it can clean items as big as a house with its 3D-printed cleaning
