For example, for my spring kafka app, I set up a topic and a producer. However, to get data from that topic I will set up a consumer and a consumer group. Hence the external cluster has the same topic and producer and it is not a consumer group. I would like to say that I am not a Kafka expert. However, in my case, I have a Java project that produces messages to a topic in an external cluster. The consumer in this external cluster take the messages from that topic. I started a Kafka Stream to consume the messages from the external cluster. I searched for this topic in Spring
