Looking forward to seeing the results of the collaboration between Apple and Adobe and the iPad Pro and Photoshop CC, especially as working with the heavy prototype of Photoshop on the larger screen is expected to change the design of Photoshop itself. If the new Air Core i-series can hold its ground against the new iPad Pro and Apple's other recent announcements, I suspect many of us will be looking at iPhones and iPads for even longer. For me, it's all about finishing. Creating a cohesive and complete package that shows your client's best side. In advertising, we can't always provide you with an original concept with finished assets. You are the creative. You are the person crafting a brand. You're the business. How will you look? In order to most effectively communicate images, images convey spatial relationships and objects and people can behave in unexpected ways. Lightroom 5 lets you control the way images look as they are imported and exported, without losing

the information. You can choose from a variety of effects to help organize your images or enhance them for specific projects from the Library view, and you can even use lightroom's geometry tools to change the look of the images after they have been enhanced. You can even protect or block lightroom from exporting your images to ensure that they remain in a consistent state. Keep your images organized and able to be shared with others easily, whether you're working on them alone or as part of a group. Creating a rich catalog is synonymous with managing photos effectively.

What we are doing with all this hard work now is adding the return to the customization of Photoshop for creative professionals on the web. Web developers have been able to contribute to the Technology Lab and build custom versions of Photoshop for creative professionals on the web. This will allow web users to select different options and even use third-party plugins. With the performance of the program being key to bring web users into the fold, we are also working on improving the performance of the Photoshop JavaScript APIs to enable better efficiency. We are also adding features that enable developers to use Photoshop more effectively. This has included building a full web implementation of the program and using WebAssembly to make Photoshop more accessible for web developers. This can be slightly overwhelming because there are a few different Creative Cloud plans to pick from according to what your area of interest is. To make things simple there are 3 different options that you will have to choose from that include Photoshop. First the 'Photography' plan which is $9.99/mo and grants you access to Adobe Photoshop and also Adobe Lightroom which is a program that allows for detailed photo editing. This is a great value considering the second option is $20.99/mo for use of only Photoshop. The third and final option which I think is the best option is the Student and Teacher plan that is $19.99/mo and includes access to every Adobe program available. This is an amazing value because you get access to everything Adobe has to offer. From there you can learn and try new programs that Adobe offers to see what your favorite is. You will be able to set up your favorite settings for each photo as well as share those edit with others. And you will be able to tag images, creating an ad hoc wiki. But, best of all, you'll be able to have 100-percent control over your images, whether on the web or in the Adobe Photoshop app, by using a full editing tool set. So, there are no external software dependencies such as Adobe Lightroom (which requires you to import photos to Lightroom, then edit in Lightroom, then export out); no third-party plugins or add-ons; no temporary internet file clutter; and no unwanted program elements cluttering up your browser or tool windows. In addition to being used for photo editing, Adobe Photoshop can be used to create and deliver 2D and 3D creative content. This includes use in print, interactive, immersive, live and virtual experiences. With the native capabilities in Photoshop and other Adobe software, you can create content that runs on a range of platforms and devices.
