The new Content-Aware option scales a specific object in an image across multiple layers. For example, you could apply it to a car in an image and then adjust to fuse a road sign onto that image. The new music-centric tools are designed to make creating music sheets easier than ever. You can add musical notation, loops, triggers, smart layers, graphic overlays, and more. Listen to music on an iOS device, tablet, or computer with the new Remote Control that you can use to control a host computer's audio. This feature makes it easier to integrate a host computer with a small but powerful music system. The new intelligent tools in Photoshop give you better control over what you see. The innovative Content-Aware system, for example, automatically scales objects in an image, thereby bringing new objects into view. The new Object Selection tool selects edges automatically, so you can use it to select even small objects, such as a person's face. The Photoshop smart selection tools—including the new Edge Lighting command—automatically light areas without adding vignetting to the image, and the Glowing selection tool automatically highlights dark areas in the image. Edge Grab combines two or more layers into a single layer. Many of the new tools are designed to speed up your entire editing process. The new, improved Quick Selection tool lets you select any area of an image as quickly as possible and save the information for future editing. The Select Points tool lets you quickly bring selected areas together for more precise edits.
