Software is all about freedom, and Lightroom 5 is no different. Eligible photographers can download a copy of the newer version of the software for free and upgrade to the paid version at any time. It's a \$149 upgrade for single-user and \$99 upgrade for multi-user licenses. For me it was easy to get going, but I can't say I've once used any of the new features. Reading about the new features under the heading "Business applications." I found it interesting to see the options related to making web pages, brochures, and sales presentations. Similarly, the addition of the new Smart Objects feature is comparatively less interesting as other tools for resizing images have them. I can't say I used them. Under Dashboard, users can get a breakdown of their image processing applications, such as noise, sharpness, exposure, and color. Since Lightroom 5 is the first to support Slideshow, videos, and AR-style panoramas, the new features are expected to benefit pro and amateur photographers. Snapchat, a free photo messaging app, launched a new feature that lets you take a snapshot of an object and snap it to anywhere on the background by using the filter. It's interesting that the latest version allows for free posting on Snapchat. Another element of the latest version of software is an option to easily upload photos to Twitter or Instagram. These are noteworthy upgrades and they make me wonder why others haven't caught on in this sort of direction. Although I think it's no coincidence that Apple invested in a company that could render the colors in their software. The difference between Apple's Aperture and Lightroom 5 is clear.

With Photoshop Camera, users can easily learn Photoshop from within the app. It showcases a time-saving workflow created specifically to work with artistic photos, made possible by AI, intuitive UI design and multi-input support. There's nothing wrong with taking your family vacation picture by picture. But wouldn't it be great if you could combine those individual pictures into a single picture that includes everyone? After all, if you could do that, you'd only be faced with one picture to look at—instead of a hundred pictures to stare at. That's the basic idea behind Photoshop's **Layer Masks** . **Background Eraser** and **Foreground Eraser** work much the same way, but they're separate tools and use slightly different methods. The one difference

is that the Foreground Eraser allows you to make changes to the surrounding area surrounding your object, while the Background Eraser can only selectively remove an area of the background. If you're in charge of a large process like animation or production design, you don't have to worry about the **Help** menu item or guidance when using Photoshop's **Panorama** tool—most of the time you don't need that kind of help, and you won't have to worry about being stumped with frequently asked questions. Sometimes, people find it challenging to save a change to a specific portion of an image. To clarify, when you change an image's "*active layer*," you are in effect making a change to that single section. When you save the image, you are only saving the image as a whole. This can get messy when you might want to save a "green" version of an image and "red" version—you'll want the green version with the image layers changed, and the red version with the image layers unchanged. e3d0a04c9c
