The first iteration of Lightroom had two major problems. The first was that it was missing a social networking system. Lightroom 5 fills this gap, and the second is an improvement to the metadata editing system. Both of these are improvements on much of the functionality that existed in Lightroom 4. That said, Lightroom 5 is not without flaws, and it appears few of them stem from the fact that developing Lightroom 5 was hindered somewhat by the discovery of Photoshop's own Lightroom API, which, as it stands, is likely to remain closed. Removing unwanted objects from a photo isn't easy -- and the image editing field is no exception. When designing the new crop tool for the desktop version of Photoshop, we deliberately wanted to make the process easy. With the ability to select strokes to condense or encapsulate your subject, this powerful new crop tool was born. The new tool provides a far better experience, especially when editing large or complex images. The latest update of Adobe XMP sidecar technology - which enables the sharing of raw files in a secure, authenticated manner without digital rights management (DRM) - will allow web-based end users to interact with raw files in the cloud that are exposed via the XMP sidecar. This solution is directly integrated into the latest release of the Adobe XD web app, and will also enhance the speed and usability of layer geometry, enabling designers to create more refined graphics in Adobe XD. The new Adobe Dimension cloud printing service, in beta, is designed to enable organizations, independent software vendors and other third parties to deliver direct-to-paper from any web or mobile device. The service will be available to all customers of Adobe Document Cloud beta, allowing them to select any type of documents from Adobe Archive or a web browser, and print with whatever color and black-and-white units they need, to a connected printer or online at a later time and location. It also enables users to print documents across multiple users with different print rights.

Originally intended for desktop home users, CorelDRAW was quickly adopted by Mac-based creatives to produce and manipulate imagery on the go as they worked, and has become essential for companies like Netflix and CopyScape, an autocorrect competition where visitors can submit text to be scored using OCR-based technologies, which relies on CorelDRAW for its content creation. Over time, CorelDRAW has continued to evolve. New features have been added that make the app easier to use and add to its value, and continue to evolve. For example, CorelDRAW X2 saw a couple major updates to its dictionary-based autocorrect technology. And with the new CorelDRAW X3 release, I'm definitely intrigued by the addition of a brand new feature as well as a new tool - a free trial option specifically for companies. Later versions of these tools will be available when hardware support for the GPU API is available in every browser. Because the Image Paint feature requires the GPU, it will not be available in some browser products, such as Internet Explorer for Windows 8. Photoshop CC is also designed with the web into its fabric. All layers in Photoshop CC are made up of all one data type, meaning if a layer in Photoshop CC is a solid color it will be no more than four bytes in size. This makes it easier for developers to access and build plugins into Photoshop without worrying about breaking a working tool or image in the process. Though it's still not as powerful as what you see with third-party plug-ins like Photoshop ColorLab, the latest engine architecture gives Photoshop CC more power and flexibility. With this new architecture, Photoshop CC opens up every pixel on every layer to an infinite variety of color space conversions (with no limit on the color gamut

you use) and even allows for real-time adjustments of receding and exaggerated color space. You can share your new merged or re-mixed images with friends and collaborators across the web without running a single line of code. This completely new color feature, which is unique to the web, dramatically increases the number of colors and levels you can work with. Previously, the only way to do this would have been using third-party plug-ins like Adobe Color Lab. Even if your open images already contain all the colors that you ever want to create, that's only one single set of colors from an infinite number of options. Using this new web technology, Photoshop CC opens up the complete range of colors you see in the physical world.
